US-09-370-838-82

Sequence 82, Application US/09370838

Patent No. 6444425

GENERAL INFORMATION:
APPLICANT: Reed, Steven G.
APPLICANT: Lodes, Michael J.
APPLICANT: Mohamath, Roadoh
APPLICANT: Mohamath, Roadoh
TITLE OF INVENTION: COMPOUNDS FOR THERAPY AND DIAGNOSIS OF
TITLE OF INVENTION: LUNG CANCER AND METHODS FOR THEIR USE
FILE REFERENCE: 210121.475C1
CURRENT APPLICATION NUMBER: US/09/370,838
CURRENT FILING DATE: 1999-04-02
NUMBER OF SEQ ID NOS: 289
SOFTWARE: FASLSEQ for Windows Version 3.0
SEQ ID NO 82
LENGTH: 418

TYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 418;

C; Accession: T30337
R; Yang, J.C.; Lindsay, L.L.; Hedrick, J.L.
submitted to the EMBL Data Library, March 1998
A; Description: cDNA cloning of ovochymase, a chymotrypsin-like protease releases
A; Reference number: Z20829
A; Accession: T30337
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: mRNA
A; Residues: 1-1524 < YAN>
A; Residues: 1-1524 < YAN>

C; Comment: This protein, synthesized in the liver, circulates as a noncovalent complex w
C; Comment: The zymogen is activated by factor XIIa, which cleaves the molecule into a liance linked by one or more disulfide bonds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          οŧ

PTM: Undegoes autoproteolytic activation.
DISEASE: Defects in TMPRSS3 are a cause of childhood-onset autosomal recessive neurosensory deafness 8 (DFNB8) [MIM:601072] DISEASE: Defects in TMPRSS3 are a cause of congenital autosomal recessive neurosensory deafness 10 (DFNB10) [MIM:605316].
SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1.
SIMILARITY: Contains 1 SRCR domain.
SIMILARITY: Contains 1 LDL-receptor class A domain.
                                                                                           ILE-53; SER-111 AND VAL-253.
